

iFlex™

Swing Gate

A-SAFE

Swing Gates provide access and exit points for pedestrians.
Available in two lengths, long and short.

The short gate has a hydraulic self-close feature to automatically return the gate to its closed position and maintain pedestrian safety. The long gate is supplied with additional post support for enhanced strength and stay-open access option for both pedestrians and vehicles.

Each gate has a double swing action, but are also supplied with gate stops to limit movement to one direction, forcing pedestrians to hesitate and pull the gate towards them. If desired, can be installed in pairs to increase the size of the opening.

Compliant to the
global benchmark
in guardrail safety

bsi. PAS 13
Code of Practice for
Workplace Safety
Guardrails

Engineered for performance

Double swing action

Gate stops included as standard

Safety green available indicating access points for fire exits, fire and safety equipment or medical assistance. It can be easily seen, especially in a long run of yellow guardrail.

Zinc nickel, electrophoretic coating on base plates as standard, provides advanced protection against corrosion damage.

Memaplex™ advanced polymer created from an exclusive composition of the most sophisticated polyolefins and rubber additives, expertly blended for unequalled durability.

Varying lengths to fit any facility. The Short Swing Gate is available from 31½ to 47¼ in 4 inch increments. The Long Swing Gate is available for larger openings up to 78¾ inches.

Ergonomic design with no sharp edges.

Environmentally friendly and 100% recyclable.

Twin-gate option allows the gate to be installed in pairs to provide a maximum opening of 94½ inches for the Short Swing Gate and 157½ inches for the Long Swing Gate.

ADDITIONAL BASE OPTIONS

- Countersunk Bolts
