

Padded Column Guard

The Padded Column Guard protects pedestrians from injuries caused by collisions with columns and other solid vertical structures. It features a durable, high-visibility cover to provide a clear visual warning, while a soft foam core absorbs impact forces in the event of a collision.

Bespoke to suit any column width, the Padded Column Guard provides 360-degree protection from floor to head height. The maintenance-free, hygienic cover material is wipe-clean, resistant to water and chemicals, and non-corroding. It is also UV-stabilised to prevent fading.

Soft but durable foam padding

Foam padding is soft to protect employees who collide with posts but durable enough to provide lasting protection.

Reduces employee injuries

Additional site protection can reduce the number of employee injuries that occur at a facility.

Effective pedestrian protection

Provides effective protection for pedestrians in busy sites with vertical posts and steel columns.

360-degree wrap-around design

The padded bumper has a wrap-around design to provide 360-degree protection from steel posts.
