## BUSINESS GROWTH WITH RACKEYE

RackEye is a racking management solution that helps you identify opportunities to maximise profitability and optimise warehouse capacity, while reducing risk across your facilities. Using smart sensor technology, racking health data is captured in real-time and then analysed to provide you with deep insight and learnings, which you can turn into decisive action.

# HOW RACKEYE WORKS

The RackEye solution combines rack-mounted sensor units, intelligent cloud-based analytics and an intuitive app-based user interface to deliver unrivalled rack health data to your smartphone, tablet or PC.

1.  Sensors on the warehouse racking instantly detect when an impact occurs, sending a signal to the Conek Gateway.

2.  The Conek Gateway notifies the Conek Cloud via Ultra Low Energy (ULE) wireless communications system that works entirely independently from your IT network infrastructure.

3.  The incident is logged on the conex cloud, which immediately sends a notification to the Rackeye system user as an alert via the app, dashboard or SMS notification to the warehouse management team.

4.  Depending on the severity of the impact, an immediate rack inspection maybe required. The RackEye smartphone app will guide the process in accordance with EN15635:2008.

5.  The RackEye Dashboard provides unparalleled insight into impact trends within your warehouse facilities, allowing an array of KPI reporting, including heatmaps of warehouse locations, incidents by rack-leg, aisle, shift, or date to identify hotspots and opportunities for improvement.

# POWER DECISIONS WITH DEEPER INSIGHT

Unlock a better understanding of how your facilities operate. Whether you have a single site or multiple sites around the world, the data collected by RackEye feeds into a central dashboard for unprecedented visibility.

Save time and resources manually assessing data with automated analysis and reporting tools, enabling you to  get the exact insights you need, exactly when you need them. From real-time activity to historic data, get a big picture view for faster, more assured decision making.

# MAKE A POSITIVE IMPACT ON YOUR BUSINESS

Book your demo now and advance the performance of your facilities in just one day.
