

ENVIRONMENTAL POLICY

At A-SAFE, we strive to maintain and improve our standing as the world's leading supplier of safety barriers and safety systems designed specifically for heavy duty industrial workplaces.

We are committed to reducing our impact on the natural environment and acting on climate change. We work hard to re-use, recycle, and become cleaner and more efficient with everything we do. Our activities and work methods achieve a balance between the environment, society and the economy, which at A-SAFE we consider essential to meet the needs of the present, without compromising the needs of future generations.

To make continuous improvements in the management of our environmental impact, we partner with others to promote environmental stewardship across our business. This increases understanding of environmental issues amongst our stakeholders and instigates good environmental practices among our people.

As part of our environmental policy, A-SAFE is committed to:

- Stopping activities where there are unacceptable risks to the environment.
- Including Environmental care into the design of our products, processes, equipment and infrastructure.
- Protecting the environment, including the prevention of pollution.
- Minimising waste and disposing of all waste in a safe and responsible way.
- Benchmarking our practices with those recognised as the best performers so we can learn and improve.
- Implementing Management systems and procedures to proactively monitor and assure compliance with all applicable laws and regulations, including our internal standards.
- Operating in accordance with ISO 14001.
- Improving the quality and transparency of all communications about the environment with all stakeholders.
- Develop and install training documentation so all people within A-SAFE are trained and able to comply with this policy.

A-SAFE will always strive to exceed the environmental requirements and expectations of its customers and encourage our suppliers to operate in a manner that is compatible with our own standards. A-SAFE is committed to improving its environmental performance through minimisation of raw material consumption, including energy, and the production of waste, ensuring that where waste is created we reuse or recycle where possible.

It is the responsibility of management to set the foundation for objectives and targets. It is also the responsibility of management to live and share the environmental vision and policy to ensure it is known, understood, and complied with by everyone within our business. All employees, subcontractors and visitors are required to comply with this policy as a condition for employment, contracts, or access to our facilities.
