HOW RACKEYE WORKS

The RackEye solution combines rack-mounted sensor units, intelligent cloud-based analytics and an intuitive app-based user interface to deliver unrivalled rack health data to your smartphone, tablet or PC.

1. Sensors on the warehouse racking instantly detect when an impact occurs, sending a signal to the Conek Gateway.
2. The Conek Gateway notifies the Conek Cloud via Ultra Low Energy (ULE) wireless communications system that works entirely independently from your IT network infrastructure.
3. The incident is logged on the conex cloud, which immediately sends a notification to the Rackeye system user as an alert via the app, dashboard or SMS notification to the warehouse management team.
4. Depending on the severity of the impact, an immediate rack inspection maybe required. The RackEye smartphone app will guide the process in accordance with EN15635:2008.
5. The RackEye Dashboard provides unparalleled insight into impact trends within your warehouse facilities, allowing an array of KPI reporting, including heatmaps of warehouse locations, incidents by rack-leg, aisle, shift, or date to identify hotspots and opportunities for improvement.

TRANSFORM YOUR SAFETY INSPECTIONS

No more outdated, paper-based inspection procedures. Create an auditable digital inspection trail that is automatically managed from assessment to resolution. Follow the step by step prompts using the RackEye app, submitting measurements, photos and observations along the way to determine the severity of the damage. Once completed, actions will be recommended based on a traffic-light approach.

GREEN – The least severe and requires little or no action to be taken.

AMBER – The medium level of severity and requires some action to be taken.

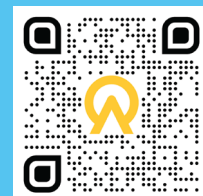

RED – The highest level of severity and requires immediate action to be taken.

The data is collected via the app and displays instantly, providing a list of follow up actions where necessary. The information is also sent to the reporting dashboard, allowing you to instantly see the amount of recommended actions over a set time period by the level of severity.

MAKE A POSITIVE IMPACT ON YOUR BUSINESS

Book your demo now and advance the health and safety of your facilities in just one day.
