

Belt Barrier

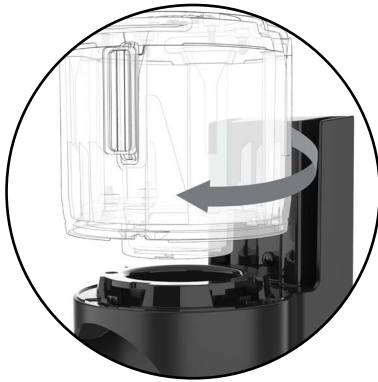

The Belt Barrier provides a dependable solution for restricting access and improving on-site safety. Designed for use between A-SAFE guardrails, walls, or a combination of both, these kits can be adapted to suit a wide range of environments.

With a consistent, professional appearance and a trusted retracting mechanism, these kits are ideal for creating clear, controlled boundaries in dynamic industrial areas.

Suitable for a wide range of temporary or semi-permanent access control needs across different areas of a facility.

Easy installation. Twist-and-lock the retractable tape into place for a secure fitting to the bracket.

Multiple units can be linked together to span longer distances or cover larger access points.

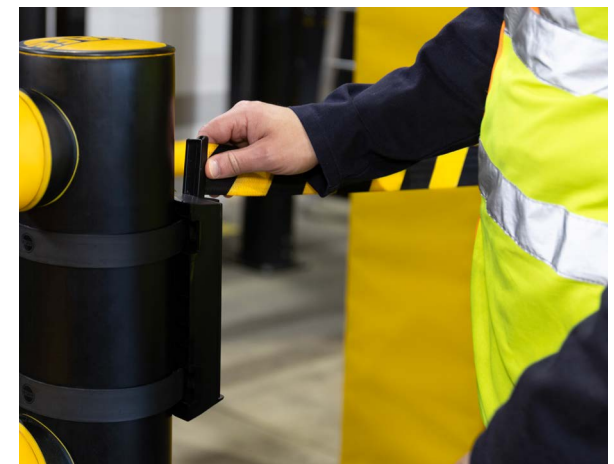

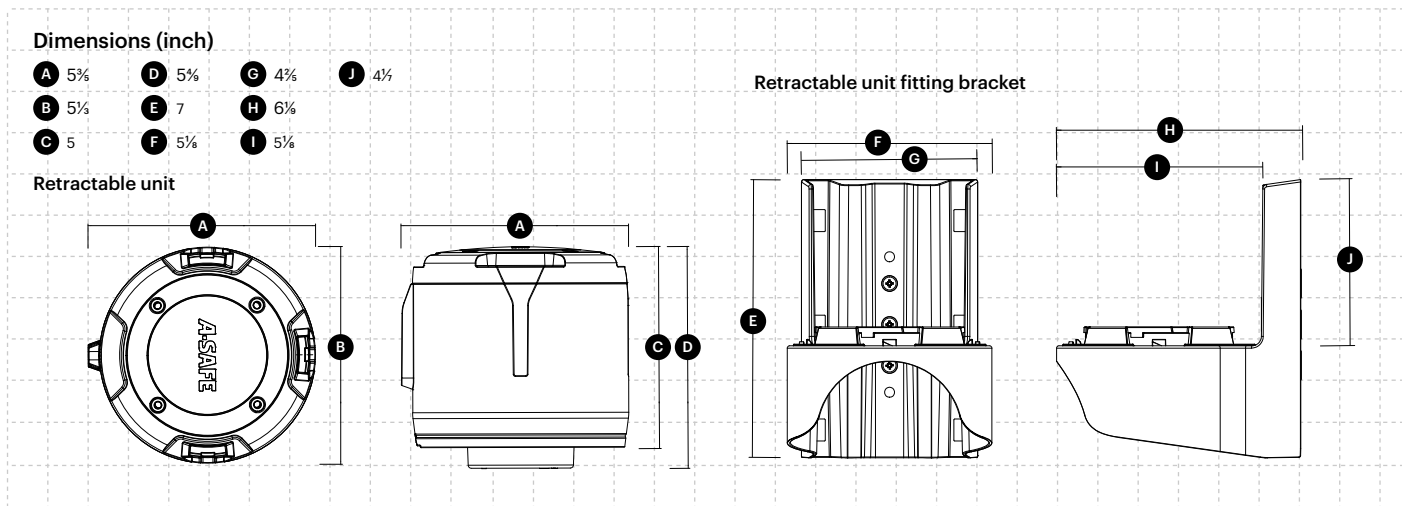

Up to 9m (29.5ft) of high quality tape webbing ensures a smooth retraction, eliminating tangling and reducing sag.

Built to perform in demanding environments, offering durability and dependable performance over time.

Technical Information

Racking receiver unit attached to an A-SAFE post.
